How to use the question converter

Please notice that this program is used with the Gamified Quiz created by two students from the University of Stockholm. This program will help you to generate your own questions in the form of an xml file that can later be uploaded and used in the Gamified Quiz.

1) First open the "QuestionBank" folder.
2) Then create a .txt file with a name of your choice.
3) Enter all of your questions in the same format as shown in the "example questions.txt" file. **Remember that it has to be 20 questions! Not less, not more!** Save the .txt file in the "QuestionBank" folder and close the .txt file.
4) Now open the "QuestionConverter" file.
5) You will be asked to input the name of your .txt file. Enter the name of your file ending with .txt.
6) Click on the OK button
7) The program will now generate an XML folder with the name: "My Questions.xml".
8) This file should now be uploaded when starting a specific instance in the Gamified Quiz program.

Please note that if you want to generate more xml files, you will have to put the already generated xml file in another file or alternatively on the desktop because if it is in the same folder it will be overwritten.

Have fun!
